Subject: broad sampling

I talked to Laura Williams and she will get the agreement from Area Command to go forward with the broad spectrum sampling at the mine site. IC EU is already prepared with sampling bottles and equipment to collect 2 samples: mine water before treatment and sediment in the treatment pond. The sampling calls for PCBs, Dioxins, dibenzofurans, 8260, 8270 (volatile and semi-volatile organics), nitrates, total chrome 200.8 metal scan which includes uranium, thallium (maybe more). We also discussed getting a water sample in cement creek upgradient of the gold king discharge. Once we get these results we will evaluate and interpret the data and decide if we need a broader sampling effort.

Thanks
